

# Colour proofing

Epson fully supports the proofing needs of a wide range of professional applications.

In publishing, fashion, design and many other fields where colour proofing is important, the three main requirements are colour accuracy, colour consistency and productivity. The Epson Stylus Pro 7900 and 9900 meet these demands with Epson UltraChrome HDR ink for superior colour accuracy and faithful reproduction, and the MicroPiezo TFP Print Head for high productivity. Package proofing and high-level dot proofing are supported, while automatic colour management and remote proofing capabilities are also provided for a more efficient workflow.

## Epson ColorBase

*Epson ColorBase is a colour calibration tool that helps to ensure optimum colour accuracy. In addition to facilitating prepress calibration for more consistent results, it provides colour measurement data to the printer driver for highest colour accuracy within the range set for the print system.*
