

Photography/fine art

Epson helps you fully realise your creativity, while making the printing process easier.

In photography and fine art, achieving colour accuracy, colour consistency and productivity is vital. The Epson Stylus Pro 7900 and 9900 meet these demands with Epson UltraChrome HDR ink for superior colour accuracy and faithful reproduction, and the MicroPiezo TFP Print Head for high productivity. In addition to a wider colour gamut and higher colour accuracy, they allow printing on a new selection of fine art papers, providing prints that can be immediately exhibited and sold. What's more, these printers are maintenance-free, easy to use, and are suitable for lab and reproduction applications.
